Overview

This interactive lunch symposium focuses on implant selection and surgical planning. The discussions will be based on patient cases that illustrate decision-making in breast implant selection for long-term results.

Key topics:

- Round textured implants: which patients, which situations?
- Round smooth implants: which patients, which situations?
- Anatomical implants: which patients, which situations?
- Patient communication and fast-track recovery: tips and tricks

Who is this event for?

This event has been designed for experienced plastic surgeons who wish to advance their surgical planning and implant selection strategies to help them achieve long-term patient results and satisfaction.
